

Case Study:

Sellafield Site: Document Scanners & Archiving Project

Our experienced team provided a full recruitment solution for a project at the Sellafield site, supporting document scanning and company archiving in partnership with **our client**. The project required a high high volume of skilled resources within a tight timeframe, and all personnel needed to undergo rigorous security clearance vetting due to the sensitive nature of the site.

Initially, our client experienced delays in onboarding because security clearance processing was impacting start dates. To address this, we implemented a solution to run the security clearance process in parallel with the recruitment process. This proactive approach ensured that candidates were fully cleared and ready to start as scheduled, enabling the client to meet project deadlines without disruption.

Through this method, we were able to:

- Deliver the required volume of resources within the agreed timeframe.
- Minimise onboarding delays caused by security clearance requirements.
- Ensure seamless project delivery, maintaining compliance and quality standards.

This approach demonstrated our ability to manage complex, security-sensitive recruitment projects while providing tangible value through innovative recruitment solutions.
